

Glenstone

ARCHITECTURAL FACT SHEET THE NEW GLENSTONE

Project Description

To provide access to a larger portion of its collection and enhance its service to the public, Glenstone has completed a major expansion of its museum facilities and landscape. The centerpiece is a new 204,000-square-foot building, called the Pavilions, designed by Thomas Phifer of Thomas Phifer and Partners.

Embedded into a rise in the landscape to give the outward impression of discrete buildings rising out of the earth, as in a traditional hill town, the Pavilions is organized within as a ring of gallery rooms surrounding a large landscaped Water Court. Rooms of varying sizes, configurations, and light conditions house single-artist installations and a multiple-artist survey of works from the Glenstone collection. The building significantly expands Glenstone's indoor exhibition space, from 9,000 to 59,000 square feet, and also provides increased office space and support facilities. A strategic master plan and site design by PWP Landscape Architecture more than doubles the area of restored woodlands, meadows and streams accessible to the public, from approximately 100 to nearly 300 acres. The expansion also provides a new public entrance and arrival building, two free-standing cafés, and, in 2019, a center that highlights environmentally sustainable practices at Glenstone.

|---------------------------------|--|
| Glenstone Overview | Located on nearly 300 acres in Potomac, Maryland, near Washington, DC, Glenstone is a museum of modern and contemporary art that offers visitors a seamlessly integrated experience of works from its collection, architecture, and landscape. Its first exhibition building, known as the Gallery, was designed by Charles Gwathmey of Gwathmey Siegel & Associates Architects and opened to the public in 2006. The natural setting, designed by Adam Greenspan and Peter Walker of PWP Landscape Architecture, incorporates major works of outdoor sculpture within rolling meadows and unspoiled woodlands. Admission to Glenstone is always free. Visits are scheduled, to ensure that guests can have an unhurried, intimate engagement with the artworks and environment. |

| Pavilions Architect | Thomas Phifer and Partners |
| Landscape Architect | PWP Landscape Architecture |
| Pavilions Groundbreaking | June 24, 2013 |
| New Glenstone Opening | October 4, 2018 |
| <i>Setting</i> | The new landscape design integrates walking paths, bridges and restored meadows and woodlands. More than 6,000 trees of 55 native species have been planted across the grounds, bringing the total installed at Glenstone to 8,000, and approximately 33 acres of existing pasture land have been developed into sustainable meadows with a range of indigenous flora. The Pavilions' Water Court is richly planted with water lilies, irises and rushes, creating a dynamic landscape that changes throughout the seasons. The visitor entrance is framed by dry-stack stone walls constructed by a master craftsman with stone sourced from a nearby quarry. |
| <i>Arrival Sequence</i> | Visitors leave their cars in a parking grove and are greeted at the nearby wood clad Arrival Hall, where they can orient themselves for their visit. Their short walk to the Pavilions proceeds over a timber bridge and into an expansive meadow, where one of the outdoor sculptures is visible in the distance. As the path curves, visitors glimpse the new building through a wooded verge of honey locusts, oaks and tulip trees, until they emerge with a full view of the Pavilions' entrance. |
| <i>Building</i> | The Pavilions first appears as a cluster of simple masonry forms, varying in size and proportions and embedded in a rise in the land. The Pavilions has eleven rooms and nine of them will feature single-artist installations at the time of the opening. One room features an inaugural installation of works by 52 artists represented in the Glenstone collection, and another |

room offers a view of the landscape. There are also artworks installed in the entry and the passage around the Water Court.

Light

Natural lighting is fundamental to the construction and design of the Pavilions. Most rooms have large clerestories or laylights to provide balanced natural light from above. One room is open to the sky. The play of light and shadow varies throughout the day; and as the seasons change, the light fluctuates, revealing subtle qualities in the artworks and providing a more natural, nuanced viewing experience.

Materials

The Pavilions' design emphasizes materials that evoke a direct, elemental and timeless dialogue with the surrounding landscape. The exterior is made of 26,000 stacked blocks of cast concrete, individually poured to measure six feet long, a foot high and a foot deep. Although no color-altering pigment was used, the pouring method and mixture of cement and sand were allowed to result in slight variations in the light gray color and in the texture. This finish deliberately contrasts with the smooth precision of the windows, which have been specially engineered using glass panels as large as nine feet wide by thirty feet tall, and are set flush into stainless steel mullions. The glass surfaces and concrete blocks form a seamless skin that bridges the building's indoor and outdoor spaces. White maple is used to clad the interior walls, ceiling and floors of the Café, Arrival Hall and the room looking out into the landscape.

Continuation of the visit

From the Pavilions, visitors may continue on a short path to the Café. Like the Arrival Hall, the Café has an exterior of cedar, which will continue to weather to a soft gray that echoes the color of the Pavilions' exterior. Visitors are able to proceed past the Café to the original museum building, the Gallery, which continues to house temporary exhibitions of works from Glenstone's collection. Past the Gallery is an additional café space, the Patio, where visitors may enjoy coffee or a snack or refresh themselves before touring the landscape.

The Gallery (Original Building)

Architect

Charles Gwathmey, Gwathmey Siegel & Associates Architects

Figures (approximate)

30,000 square feet (gross)
Gallery space: 9,000 square feet

Materials

Stone (for exterior walls, interior floors, and terrace), zinc (for exterior panels), teak, and glass

The Pavilions (New Building)

Architect

Thomas Phifer, Thomas Phifer and Partners

Figures (approximate)

204,000 square feet for the Pavilions
240,000 square feet total for all expansion buildings

Construction cost: approximately \$200 million

Principal areas include:

Galleries: 50,000 square feet

Offices: 12,000 square feet

Water Court: 18,000 square feet

Materials

Pavilions materials:

Stacked cast concrete blocks for exterior and interior walls. Large glass windows in stainless steel frames. Poured-in-place architectural concrete ceilings and terrazzo floors. Plaster walls for selected art display. White maple used for the interior floors, walls and ceilings of selected spaces.

Landscape Materials:

Carderock stone features throughout the site. Cedar entry gate and bridges. Poured-in-place concrete and granite in Water Court. Crushed granite paving. Restored woodland primary species include Tulip Poplar, White & Red Oak, American Beech, Sycamore, Red Maple, Black Gum, and American Holly. Native meadow and understory primary species include Little Bluestem, Purpletop, Carex, and Ferns.

Other Facilities

Arrival Hall and Café: White maple interior and cedar exterior cladding

Environmental Center: pre-engineered steel buildings

Patio: Zinc, granite, teak, stucco, Venetian plaster (interior), limestone (interior), Douglas fir (interior), glass
